Professional Summary

Full-stack developer with 2+ years building production apps in TypeScript, from PostgreSQL schemas and NestJS/Express APIs to React, Next.js and Angular frontends. Recent work includes a Paystack payments backend with webhook idempotency and an asset-tracking system with audit logs and real-time notifications.

Skills

Languages: JavaScript, TypeScript, SQL

Frontend: HTML, CSS, React, Next.js, Angular, Tailwind CSS, Chakra UI, Material UI

Backend: Node.js, Express.js, NestJS, REST APIs, WebSockets, JWT, Passport

Database: PostgreSQL, MongoDB

Testing and Tools: Jest, Postman, Insomnia, Swagger, Git, Figma

Professional Experience

Full-Stack Developer

Seamfix Developer Program ATM **May 2026 - July 2026**

- Designed a system-wide audit log covering asset movement, user logins, and admin-created users and assets, with location-scoped visibility so each branch sees only its own activity, modeling the tables and flows in diagrams.net first.
- Built bulk upload for users and assets from downloadable Excel templates, handling 70+ records in a single upload, which removed the manual data entry for onboarding. Each upload creates the records and sends email notifications
- Delivered 80% of the backend unit tests across a 13-table PostgreSQL schema, using Cursor to draft cases and reviewing and correcting each one.
- Built the frontend: 15 screens, including 5 role-specific dashboards, from Figma designs.
- Added real-time notifications over WebSockets, with live UI updates using BehaviorSubject and Angular Signals.
- Improved frontend performance with route-level preloading, code splitting, and OnPush change detection.

Backend Developer

Voltnet **November 2025 - March 2026**

- Designed a 10+ table PostgreSQL schema covering users, wallets, referrals, payments, and orders, using enum constraints and indexed queries for reliable transaction tracking.
- Implemented JWT authentication with four role levels, so users see only their own transactions while admins and super admins handle disputes and refunds.
- Built a Paystack payment integration for wallet funding and order fulfillment, processing over ₦1M across 63 beta users, with a cron job that reconciles abandoned payments every 30 minutes.
- Fixed a webhook race condition that could double-charge users, using an idempotency check on a UUID header plus a unique constraint on payment references (insert on conflict do nothing).
- Integrated two vendor APIs (ClubKonnect and Ebills) and routed each order automatically to the cheaper vendor.

Full-Stack Developer

E-swift **August 2024 - October 2025**

- Built a real estate management app with Next.js, Express.js and MongoDB, used to manage about 40 properties at launch (land, completed houses and unfinished houses).
- Added search filters, pagination and an application form so customers could apply for affordable housing, while admins tracked properties and coordinated staff.
- Used Next.js Server Components by default and Client Components only for interactive parts, to keep listing pages SEO-friendly.
- Set up authentication and role-based access control (Passport, JWT) across the backend and frontend.
- Moved file storage (images and PNGs) from a Railway volume that was running out of space to the company's Google Drive, avoiding the cost of extra volume storage.
- Set up company-domain email on Zoho's free plan for a team of 5, avoiding paid Google Workspace seats (from $7 per user per month).

Frontend Developer

PocketFood **January 2024 - August 2024**

- Revamped the landing page using Next.js, attracting 650+ sign-ups on launch day.
- Built a React vendor dashboard with Google Maps integration, making order management easier for vendors and reducing customer delivery questions by 20%.
- Built a location tracking system using query parameters that prompts users and vendors to share their current location when placing or accepting orders, enabling automatic

distance calculation and delivery time estimates.
- Improved app performance through code splitting, React optimizations, lazy loading, and data caching, making pages load 25% faster.

Education and Certification

- Kogi State University Anyigba | BSc Biochemistry | 2nd Class Upper.
- React – The Complete Guide – Udemy (2025)
- Seamfix full-stack developer program (2026)
